

List of variables and code names

The table gives an overview of the variables used in the [4C Model description](#) and their names in the source code. In addition, details are specified about the declaration, calculation and use of the variables in the source code.

Calculation in: Abbreviations: (I) = initialisation in, (D) = deallocation in, (A) = allocation in

Cat. (Category): V – variable, P – parameter, S – species parameter, I - input variable, F - function

For abbreviations see [4C Model description](#), Appendix 6 Abbreviations

Variable source code name	Data Module	Variable	Definition	Dimension	Data type	Calculation in	Used in	Cat.
